# Aworld company

**Aworld wants to be a fully community driven decentralized exchange, with community users holding 100% of the platform token AWO.**

Different from the traditional centralized finance and exchange, the emergence of decentralized finance and exchange enables users to hold their own assets safely, and conveniently participate in various DeFi projects to obtain income. However, there are some problems in common DeFi projects, such as high threshold, high transaction cost, unfair token distribution, large number of team pre-mine and pre-sale. Aworld aims to create a decentralized platform that perfectly solves existing problems, has a complete ecosystem and real global influence, and eventually develops into a unicorn level decentralized exchange.

# Aworld Ecosystem

There are four phases of Aworld ecosystem, in which the total amount of token AWO is 3 million, which will be distributed in the first three stages, and it will be destroyed with the official buyback, so as to reduce the total supply of AWO and achieve the purpose of deflation and value-added.

# Phase 1: Aggregator vault

- Maximum 1,000,000 AWO token will be distributed in Aworld vault phase, meanwhile, official buyback will be launched.
- Aworld investors will receive AWO token weekly, based on 1% of investment value.

- $$\text{WeeklyAWO amount} = \frac{\text{Vault investment value} * 1\%}{\text{CurrentAWO price}}$$

# Phase 2: Staking

Maximum 1,000,000 AWO token will be distributed in Aworld staking phase which include 3 staking pools.

AWO pool, AWO token will be distributed monthly based on 10% of AWO staking value.

$$\text{MonthlyAWO amount} = \frac{\text{AWOstaking value} * 10\%}{\text{CurrentAWO price}}$$

USDT pool, AWO token will be distributed monthly based on 8% of USDT staking value.

$$\text{MonthlyAWO amount} = \frac{\text{USDTstaking value} * 8\%}{\text{CurrentAWO price}}$$

Vault proof pool, AWO token will be distributed monthly based on 0.8% of vault investment value.

$$\text{MonthlyAWO amount} = \frac{\text{Vaultinvestmentvalue} * 0.8\%}{\text{CurrentAWO price}}$$

# Phase 3: Liquidity mining

Maximum 1,000,000 AWO token will be distributed in Aworld liquidity mining phase which include 2 liquidity pools.

AUSD pool,  
AWO token will be distributed monthly based on 10% of AUSD value.

$$\text{MonthlyAWO amount} = \frac{\text{AUSDstaki ngvalue} * 10\%}{\text{CurrentAWO price}}$$

AETH pool,  
AWO token will be distributed monthly based on 10% of AETH value.

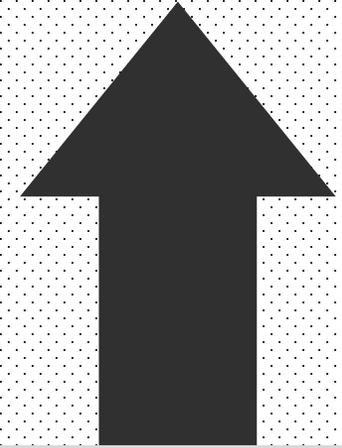

$$\text{MonthlyAWO amount} = \frac{\text{AETHstakin gvalue} * 10\%}{\text{CurrentAWO price}}$$

### Phase 4:

**Aworldswap, AWO holders will get bonus from Aworldswap exchange fees.**

### Phase 5:

**Lending platform and other DeFi services.**

# AWO Token

The AWO token can be used to participate in the staking pool and liquidity mining pool to obtain more AWO.

AWO is the ERC20 token issued by Aworld based on Ethereum. As the only platform token of Aworld, AWO holders have the right to participate in the ecology of Aworld, and the holders will automatically receive 50% of AWO dividends out of 5% of the official buyback fee and 50% of USDT dividends out of 3% of the Aworldswap exchange fee.
